3	A portable electrically powered clamp application tool
4	has a bench mounting kit with a foot pedal control for bench
5	work. The tool has two grippers which enable a powered
6	clamp cutting operation, wherein the only manual step is
7	bending the tightened clamp prior to triggering the cutter
8	arm. A gripper element is non-rotational and has teeth. It
9	locates the material being gripped in a repeatable manner in
10	spite of oil or other lubricants on the clamp. After the
11	cutting operation an automatic release assembly releases the
12	clamp. A manual lever(s) can also release a tail of a
13	clamp.
